

**LABORATORY NAME:** Inovie-LxBio, Rodez, France

**TESTIMONIAL PROVIDED BY:**

Dr. M.Baynat . Medical Biologist, Lab QC Manager, Inovie LxBio.

**INSTRUMENT:** Abbott Alinity ci series

**QC USED:** Technopath Multichem® S Plus and IA Plus (QC was run typically 7 days a week, 3 times a day.)

**Barcoded vials that can be used directly on the machine (Automation)**

- No configuration required
- The control profiles have been configured for each instrument and dedicated racks containing the control vials are kept in the fridge, ready to be loaded directly
- Greatly facilitates the processing of controls when necessary

**Time saving from two perspectives**

- Ready-to-use vials
- Less handling

**Economy (Lower cost)**

- Consolidation greatly reduces waste, especially in immunoassay, where the sampling volume is much larger

**Quality of results**

- The consolidation does not affect the CVs and the biases whatever the parameter
- Interlaboratory peer comparisons with a large number of peers are managed by the IAMQC® software
- The results of our EQAs, managed by our OCIL\*, are very satisfactory

**Low number of control vials (Consolidation)**

- 60 serum-drug chemistry parameters: 1 single and same vial for each level of control
- 12 urinary chemistry parameters: 1 single and same vial for each level of control
- 31 HORMONO-MARKERS-VITAMIN parameters
- 29 parameters: 1 single and same vial for each level of TCD control
- 1 Immuno-suppressant drug: 1 vial of TCD control for each level

\* OCIL: Organisateur de Comparaison Inter-Laboratoire (an InterLaboratory Comparison Organization in accordance with NF EN ISO/IEC 17043)

*"The great advantage to Technopath Barcoded QC vials is that they can be used directly on the instrument. The QC profiles have been pre-configured for each test on the instrument and dedicated QC racks containing the QC vials are kept in the fridge, ready to be launched directly. This greatly facilitates the processing of quality controls when needed. As the vials are ready to use, we experience significantly less handling which gives substantial time saving. The level of test consolidation in Technopath QC greatly reduces waste, especially in immunoassay, where the sampling volume is much larger.*

*We are fully satisfied with the quality of results. The consolidation does not affect the CVs and the biases whatever the test parameter. We have convenient access to peer comparisons with a large number of peers all managed by Technopath's IAMQC software. Finally the results of our EQAs, managed by our OCIL, are very satisfactory."*

Dr. M.Baynat . Medical Biologist, Lab QC Manager, Inovie LxBio.
